BUSINESS SPECIFICATIONS FOR TRAINS ARRIVING LATE / DEPOT DASHBOARD AUTOMATION

1. Business Context

- Measurement of trains arriving late by providing minutes late arrived at any location.
- Linked to the *Capacity Management, Improve / Optimise, Monitoring & Control, Production Planning, Order Execution and Customer Interaction* (from value chain and L1 level)

2. Project Context

- Name: Business Specifications – KPI / Depot Dashboard Automation
- Purpose: Automate dashboards in use in yards/depots - this is to provide management a view of trains arriving late.

3. KPI Definition

3.1 On Time Arrivals - Minutes late per train (All trains that arrived late)

- Trains that will be acted upon are those that arrive late. This measurement is the actual arrival time of the train measured against the scheduled arrival time.
- These trains can arrive at any location which is according to the scheduled arrival location, i.e. Yards, Stations and private sidings
- This KPI measure the actual number of trains arrived late with the minutes that they are late.

4. Measure Context

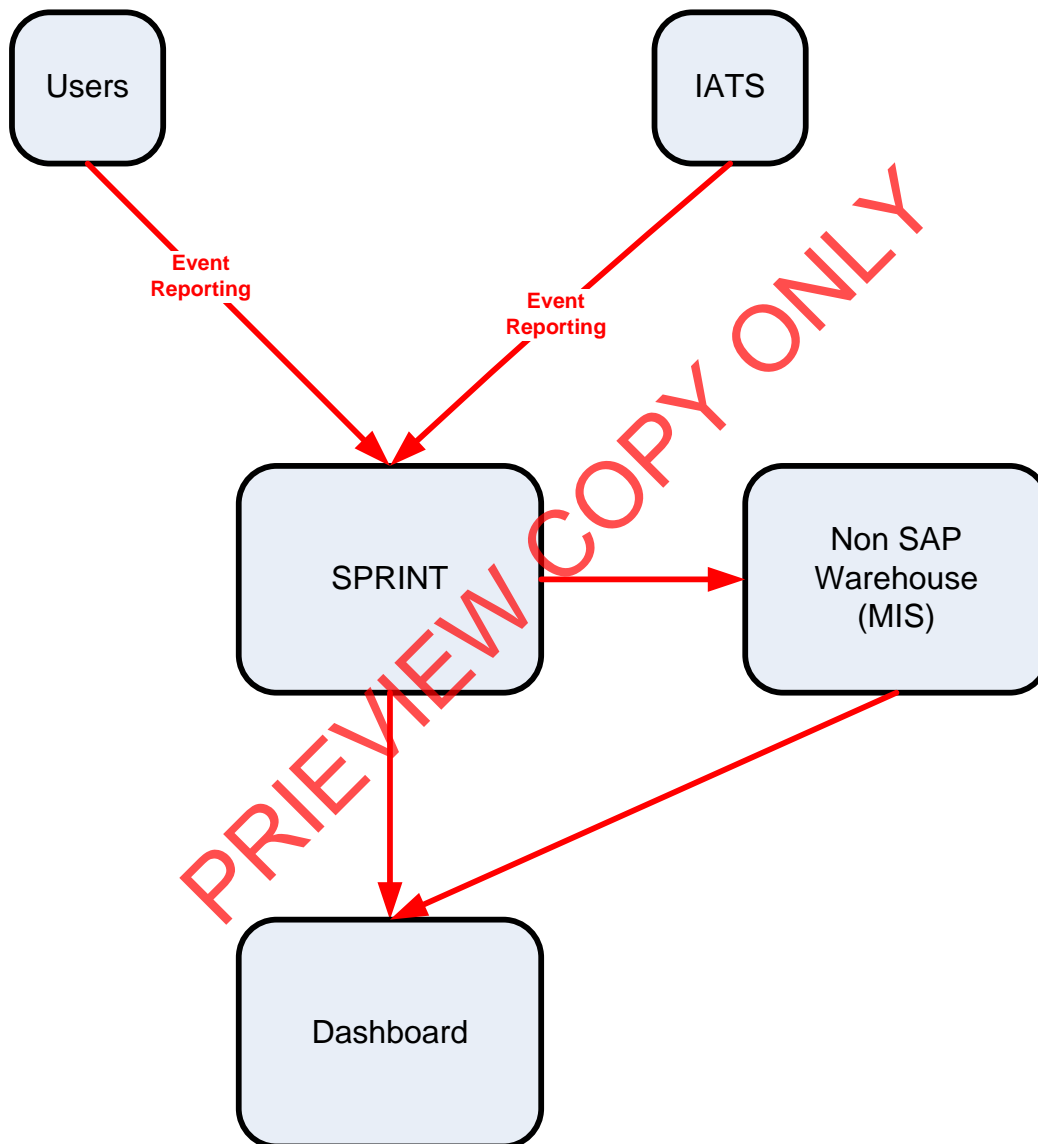

- Feed to / feed from:

This measurement stands on its own i.e. it does not use another measure in its calculation nor is it used to calculate a higher level measure. It is however aggregated on various levels per location.

Trains that arrive late are currently available on Real time Monitoring System and Decision Support (MIS)

5. Data Description

- Source systems
 - Capture onto the Sprint and IATS systems
- Data flows model

- Components of the calculation required: N/A

6. Solution Requirements

- Minimum requirements:
 - Dimensions / parameters:

- Operational structure; starting on location level and aggregated to Yard, Area, Cluster, Region and TFR level
 - Primary requirement is to track trains arrive late.
 - TFR yards, locations should be easily extracted from a location perspective.
 - Reporting periods: Daily,
 - Graphics: Printable bar graphs and tables in PDF-format – rolling 30 days.
 - Ability to navigate between levels.
 - Linked to other measures in the “Depot Dashboard”.
- Additional requirements to optimise this solution:
 - Dimensions / parameters: More detail re. Locations, Areas, Regions, etc. (sortable per criteria).

7. Solution Proposal

- Solution detail:

To obtain the KPIs, a link “**Train and Rolling Stock Performance Indicators**” will be published on the portal. When the user clicks on this link, a list of resources under which the different summarised list of KPI’s will be displayed i.e. Trains, Locomotives and Wagons.

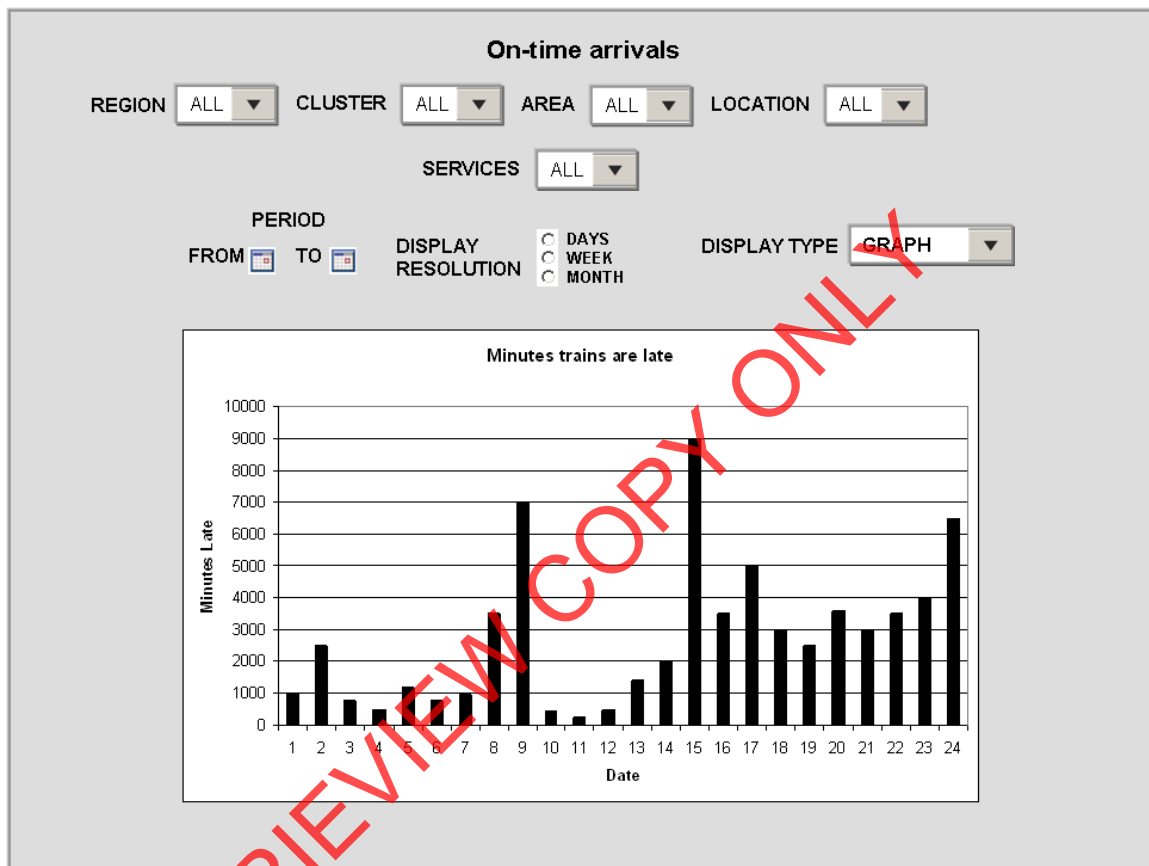

Trains
Locomotives
Wagons

The user would then be able to drill down on each of these summarised lists. In this case, they would select “**Trains**”

Trains
On Time Arrivals - Minutes late per train
On Time Departures - Minutes late per train
Run more trains - Trains run per day
Run trains with all possible wagons - Wagons per train
Staged loads
Locomotives
Locos standing longer than a selected number of hours
Wagons
Wagons standing longer than a selected number of hours

When the user clicks on a specific KPI, e.g. “**On time arrivals – Minutes late per train**”, the screen with the selection parameters will be displayed for that KPI (See diagram below). The “DISPLAY TYPE” will default to “GRAPH”

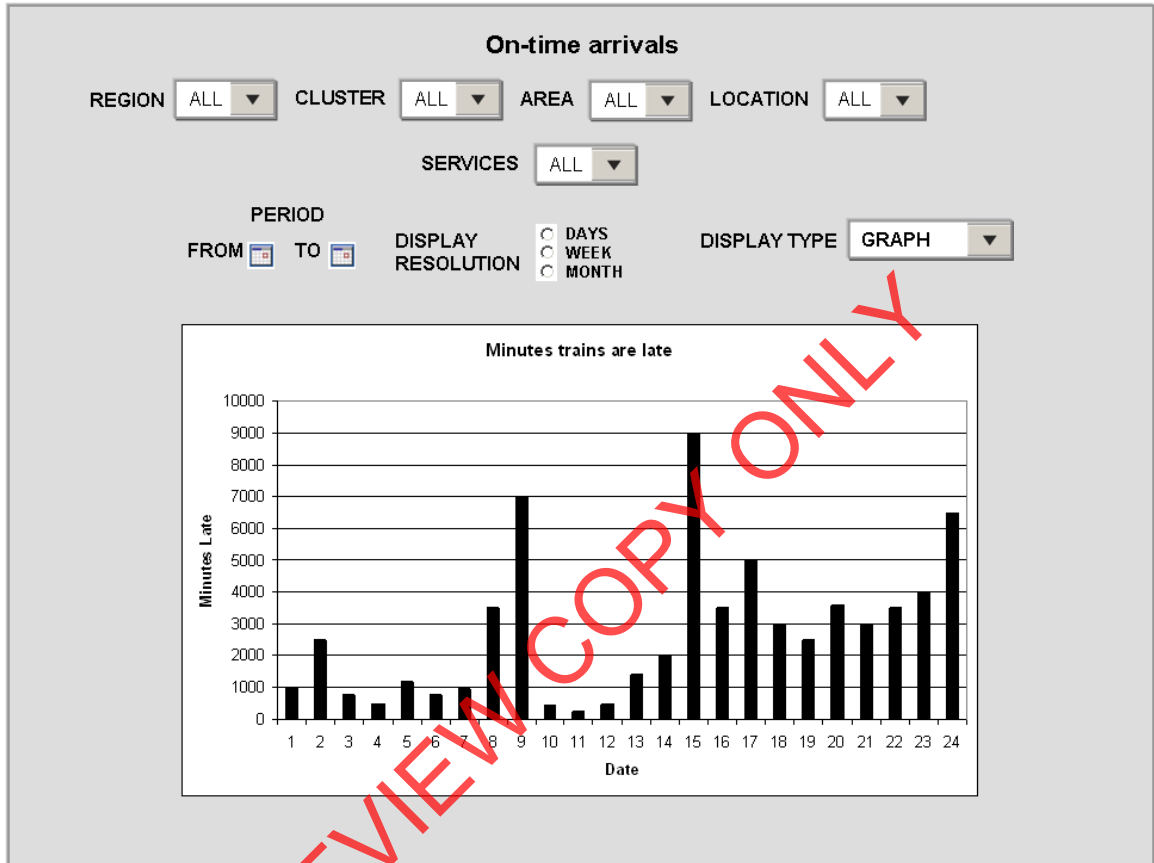

The following dropdowns should be available

- Region:** Drop down with the following: All, Central, Eastern, and Western.
- Cluster:** Drop down related to region selected, if no region selected all clusters.
- Area:** Drop down related to region selected, if no region selected all areas.
- Location:** Drop down related to region and/or area selected as specific yard/depot can be selected.
- Services:** As used in the ITP (as found in MIS).
- Period (from/to)** User can select with calendars the From – To dates.
- Display resolution** This can be selected to provide information per Day (Max 31), Week (Max 52), Month (Max 24)
- Display type:** The output can be either in Graph or Detail format

After completing the above screen, the execution of the report to generate information will automatically be performed displaying a bar graph according to the information selected. The “DISPLAY TYPE” will default to “GRAPH”

The user can now change the different dropdown to get the desired results in either Graph or Detail view.

When “Detail” view is selected together with all the other appropriate selections the detail will be displayed at the bottom of the screen, i.e.

On-time arrivals

Column description

- ❖ (--First column--) = Wagon sequence number
- ❖ Wagon number = The wagons number on the train list.
- ❖ Wagon type = The type of the wagons in the previous column
- ❖ Owner = The owner of the wagons in column 2
- ❖ Contents code = The handling code of the specific wagon.
- ❖ Load station = The loading location code.
- ❖ Consignment = The consignment number of the wagons

- Proposed approach (best way to solve current needs/issues)\
 - To be decided and implemented.

Note: All above displays are illustrative. Final displays will be dependent on system functionality and dashboard standardisation.

8. Business rules

- **Region**
 - It can only belong to one of the following, Central, Eastern, or Western and must exist in Locnet
- **Area**

- Can only be an area that exists in Locnet.
- **Train number**
 - Must be a valid train number extracted from the database
- **Depart from**
 - Must be a location from the database from where trains depart and must match the selection
- **Depart to**
 - Must be a location from the database where to the trains from the selection list departed to
- **Minutes late arrival**
 - This must be numeric and the difference between the scheduled and actual arrival date and times.

BUSINESS SPECIFICATIONS FOR TRAINS DEPARTING LATE / DEPOT DASHBOARD AUTOMATION

1. Business Context

- Measurement of trains departing late by providing minutes late departed at any location.
- Linked to the *Capacity Management, Improve / Optimise, Monitoring & Control, Production Planning, Order Execution and Customer Interaction* (from value chain and L1 level)

2. Project Context

- Name: Business Specifications – KPI / Depot Dashboard Automation
- Purpose: Automate dashboards in use in yards/depots - this is to provide management a view of trains departing late.

3. KPI Definition

3.1 On Time Departures - Minutes late per train (All trains that departed late)

- Trains that will be acted upon are those that depart late. This measurement is the actual departure time of the train measured against the scheduled departure time.
- These trains can depart from any location which is according to the scheduled departure location, i.e. Yards, Stations and private sidings
- This KPI measure the actual number of trains departed late with the minutes that they are late.

4. Measure Context

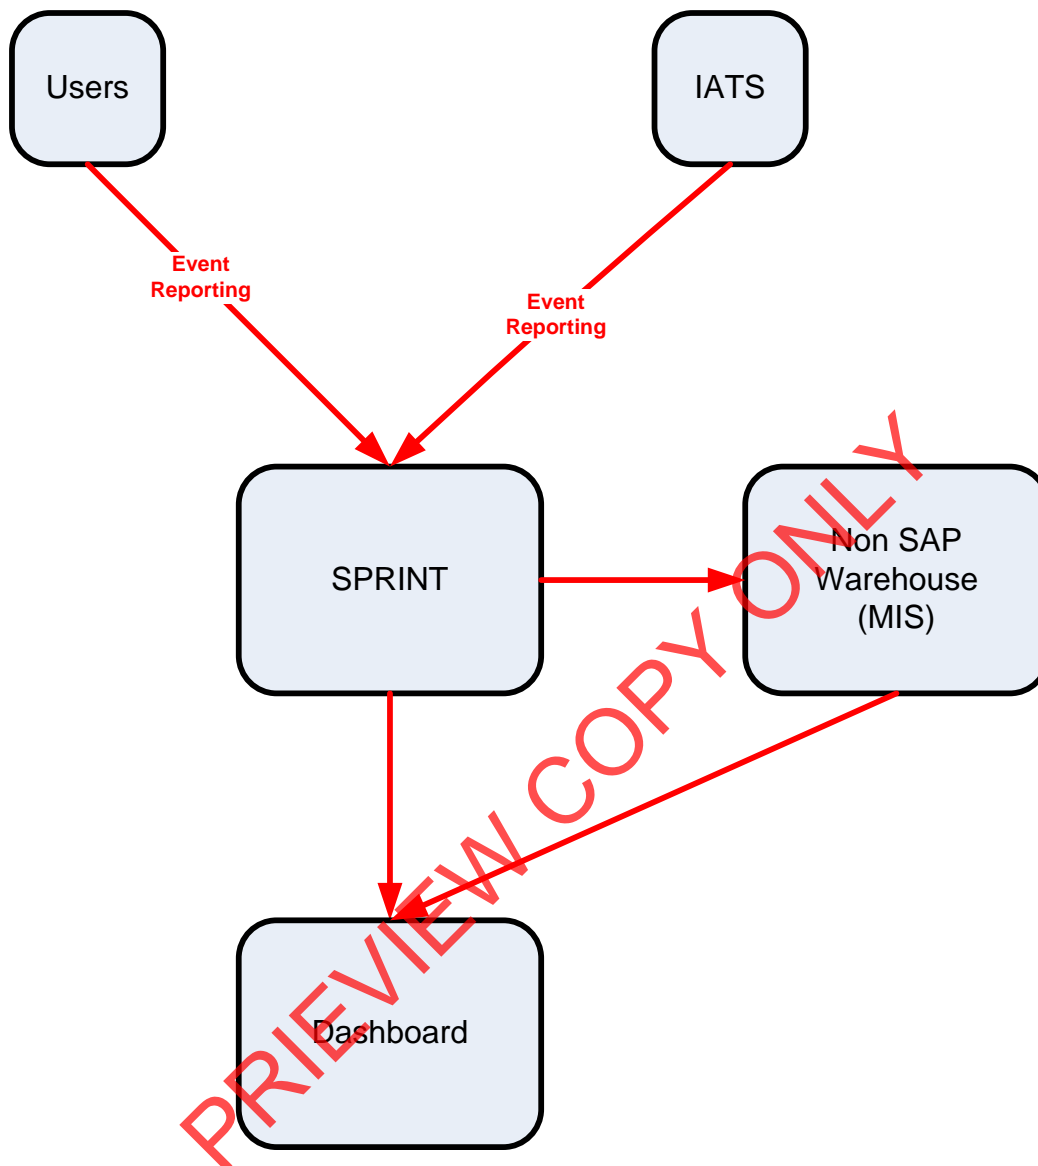

- Feed to / feed from:

This measurement stands on its own i.e. it does not use another measure in its calculation nor is it used to calculate a higher level measure. It is however aggregated on various levels per location.

Trains that departs late are currently available on Real time Monitoring System and Decision Support (MIS)

5. Data Description

- Source systems
 - Capture onto the Sprint and IATS systems
- Data flows model

- Components of the calculation required: N/A

6. Solution Requirements

- Minimum requirements:
 - Dimensions / parameters:
 - Operational structure; starting on location level and aggregated to Yard, Area, Cluster, Region and TFR level
 - Primary requirement is to track trains arrive late.
 - TFR yards, locations should be easily extracted from a location perspective.
 - Reporting periods: Daily,

- Graphics: Printable bar graphs and tables in PDF-format – rolling 30 days
 - Ability to navigate between levels
 - Linked to other measures in the “Depot Dashboard”
- Additional requirements to optimise this solution:
 - Dimensions / parameters: More detail re. Locations, Areas, Regions, etc. (sortable per criteria).

7. Solution Proposal

- Solution detail:

To obtain the KPIs, a link **“Train and Rolling Stock Performance Indicators”** will be published on the portal. When the user clicks on this link, a list of resources under which the different summarised list of KPI’s will be displayed i.e. Trains, Locomotives and Wagons.

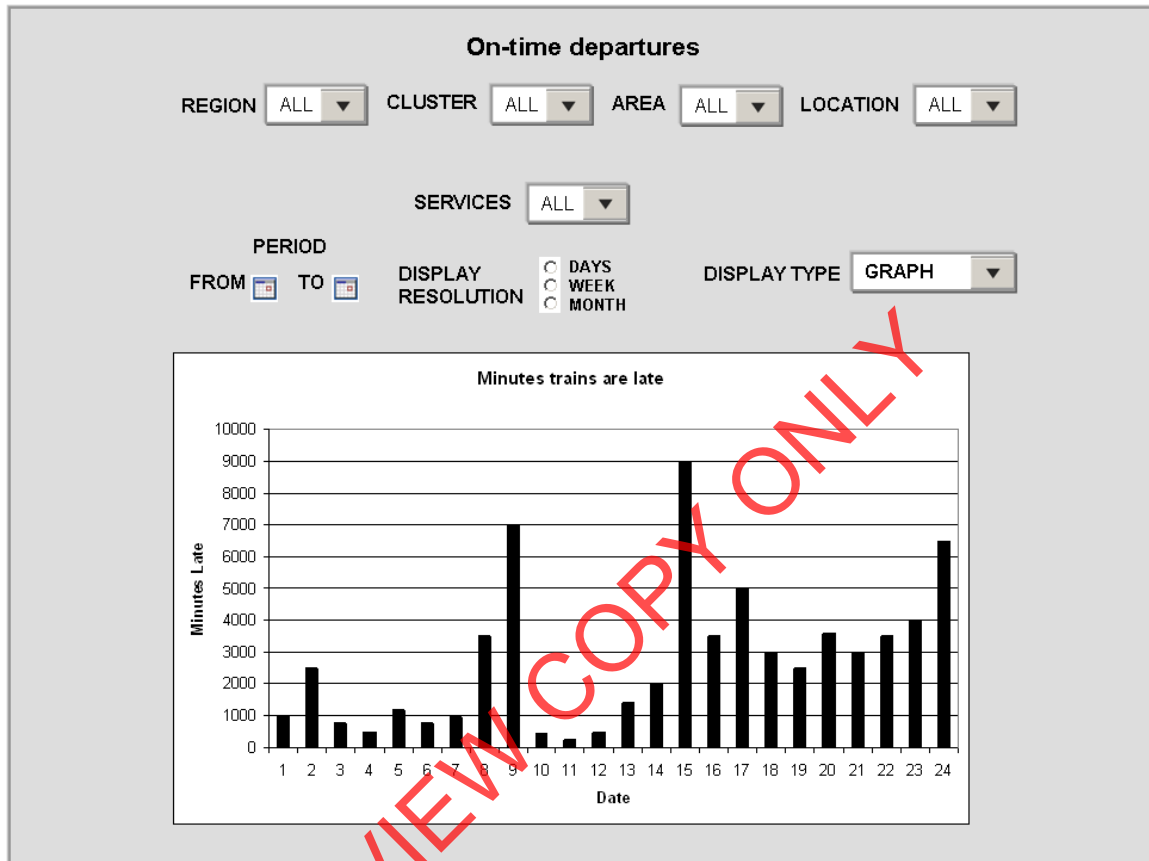

Trains
Locomotives
Wagons

The user would then be able to drill down on each of these summarised lists. In this case, they would select **“Trains”**

Trains
On Time Arrivals - Minutes late per train
On Time Departures - Minutes late per train
Run more trains - Trains run per day
Run trains with all possible wagons - Wagons per train
Staged loads
Locomotives
Locos standing longer than a selected number of hours
Wagons
Wagons standing longer than a selected number of hours

When the user clicks on a specific KPI, e.g. **“On time departures – Minutes late per train”**, the screen with the selection parameters will be displayed for that KPI (See diagram below). The **“DISPLAY TYPE”** will default to **“GRAPH”**

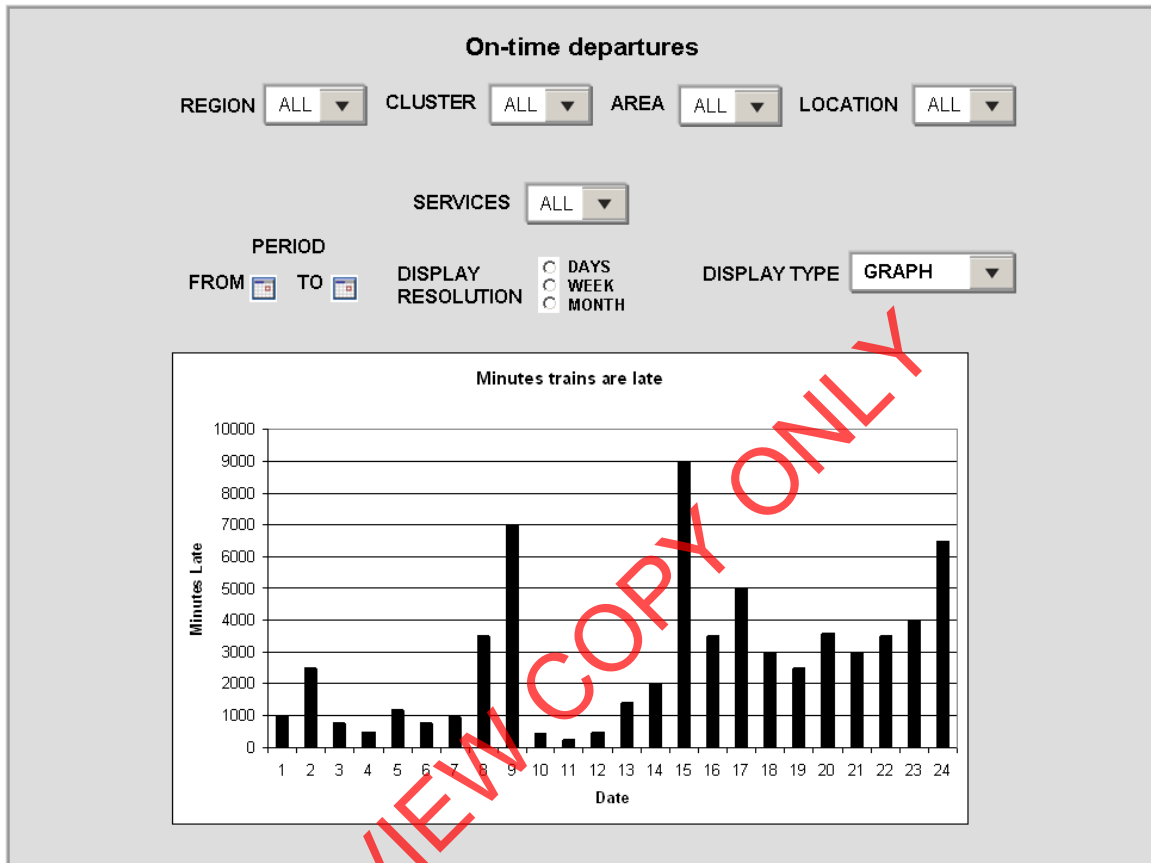

The following dropdowns will be made available.

- Region:** Drop down with the following: All, Central, Eastern, and Western.
- Cluster:** Drop down related to region selected, if no region selected all clusters.
- Area:** Drop down related to region selected, if no region selected all areas.
- Location:** Drop down related to region and/or area selected as specific yard/depot can be selected.
- Services:** As used in the ITP (as found in MIS).
- Period (from/to)** User can select with calendars the From – To dates.
- Display resolution** This can be selected to provide information per Day (Max 31), Week (Max 52), Month (Max 24)
- Display type:** The output can be either in Graph or Detail format

After completing the above screen the execution of the report to generate information will automatically be performed displaying a bar graph according to the information selected.

The user can now change the different dropdown to get the desired results in either Graph or Detail view.

When “**Detail**” view is selected together with all the other appropriate selections the detail of all trains that departed late will be displayed at the bottom of the screen, ie.

10. Technical SQL

Detail of trains departing late according to the schedule can be extracted from the RAIL.TREINSHEDMON_TAB (BTQ4) which is available on the MIS environment using the following SQL:-

Please ensure that, in the where clause, the “DEPARTDT3G” = the previous day’s date at time of enquiry.

```

BUSINESS SPECIFICATIONS FOR STAGED LOADS AT MIDNIGHT / DEPOT DASHBOARD AUTOMATION

1. Business Context

- Measurement of Staged loads at midnight at any location
- Linked to the *Capacity Management, Improve / Optimise, Monitoring & Control, Production Planning, Order Execution and Customer Interaction* (from value chain and L1 level)

2. Project Context

- Name: Business Specifications – KPI / Depot Dashboard Automation
- Purpose: Automate dashboards in use in yards/depots - this is to provide management a view of all staged load en-route to its final destination.

3. KPI Definition

3.1 Staged loads at midnight

- Trains that will be acted upon is those that did not reach it's final destination and would need a Plan "B" train to move it from the current location to it's final destination and which are reported as staged on Sprint
- These trains can be standing in any location, i.e. Yards, Exchange Yards, stations and holding areas
- This KPI measure the actual number of Staged loads at midnight – Detail per train is also available.

4. Measure Context

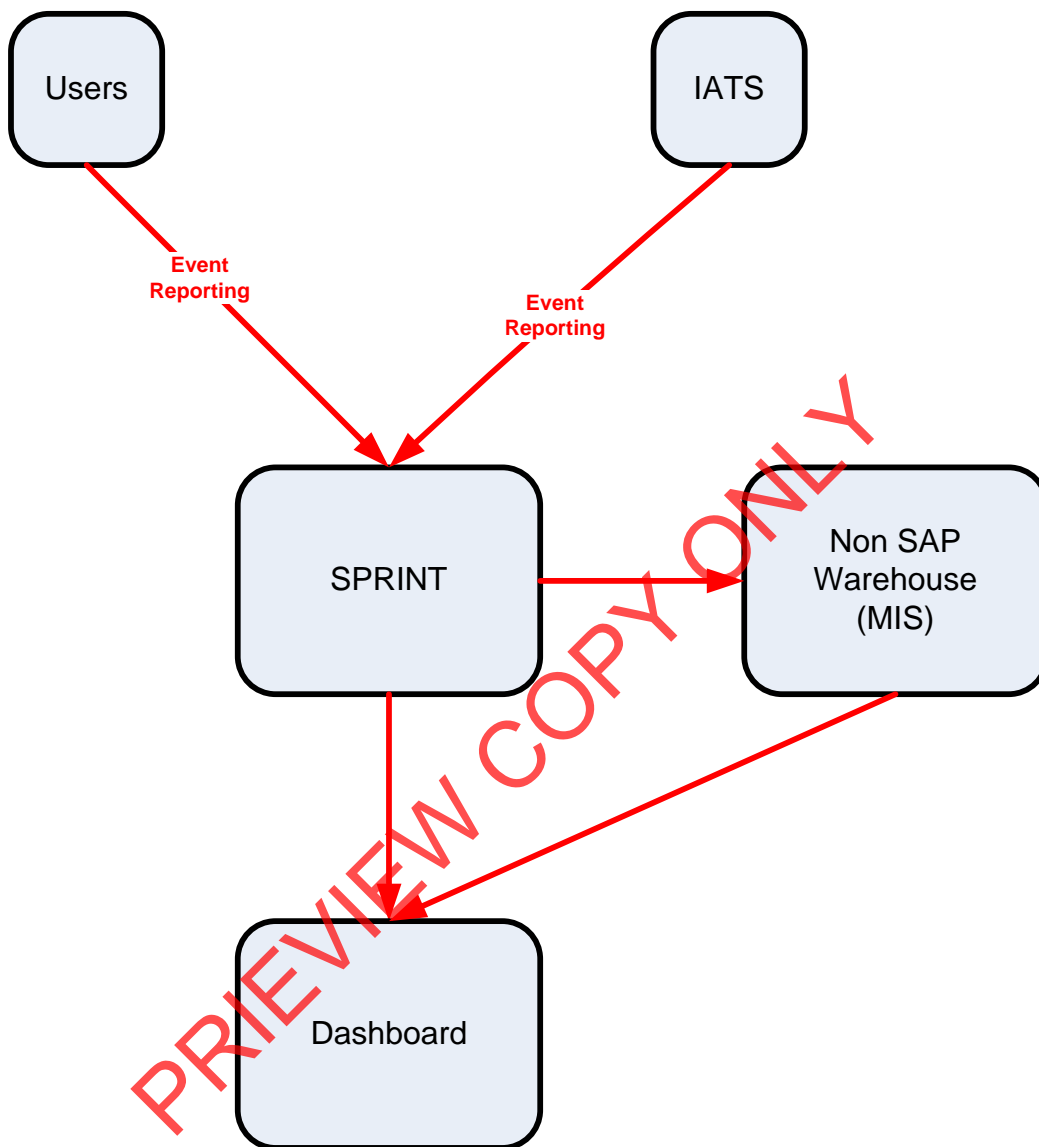

- Feed to / feed from:

This measurement stands on its own i.e. it does not use another measure in its calculation nor is it used to calculate a higher level measure.

Staged loads at midnight are currently only available on Real time Monitoring System IATS graphical viewer.

5. Data Description

- Source systems
 - Capture onto the Sprint and IATS systems
- Data flows model

- Components of the calculation required: N/A

6. Solution Requirements

- Minimum requirements:
 - Dimensions / parameters:
 - Operational structure; starting on location level and aggregated to Yard, Area, Cluster, Region and TFR level
 - Primary requirement is to track trains that are staged.
 - TFR yards, locations should be easily extracted from a location perspective.
 - Reporting periods: Daily,

- Graphics: Printable bar graphs and tables in PDF-format – rolling 30 days
 - Ability to navigate between levels
 - Linked to other measures in the “Depot Dashboard”
- Additional requirements to optimise this solution:
 - Dimensions / parameters: More detail re. Locations, Areas, Regions, etc

7. Solution Proposal

- Solution detail:

To obtain the KPIs, a link “**Train and Rolling Stock Performance Indicators**” will be published on the portal. When the user clicks on this link, a list of resources under which the different summarised list of KPI’s will be displayed i.e. Trains, Locomotives and Wagons.

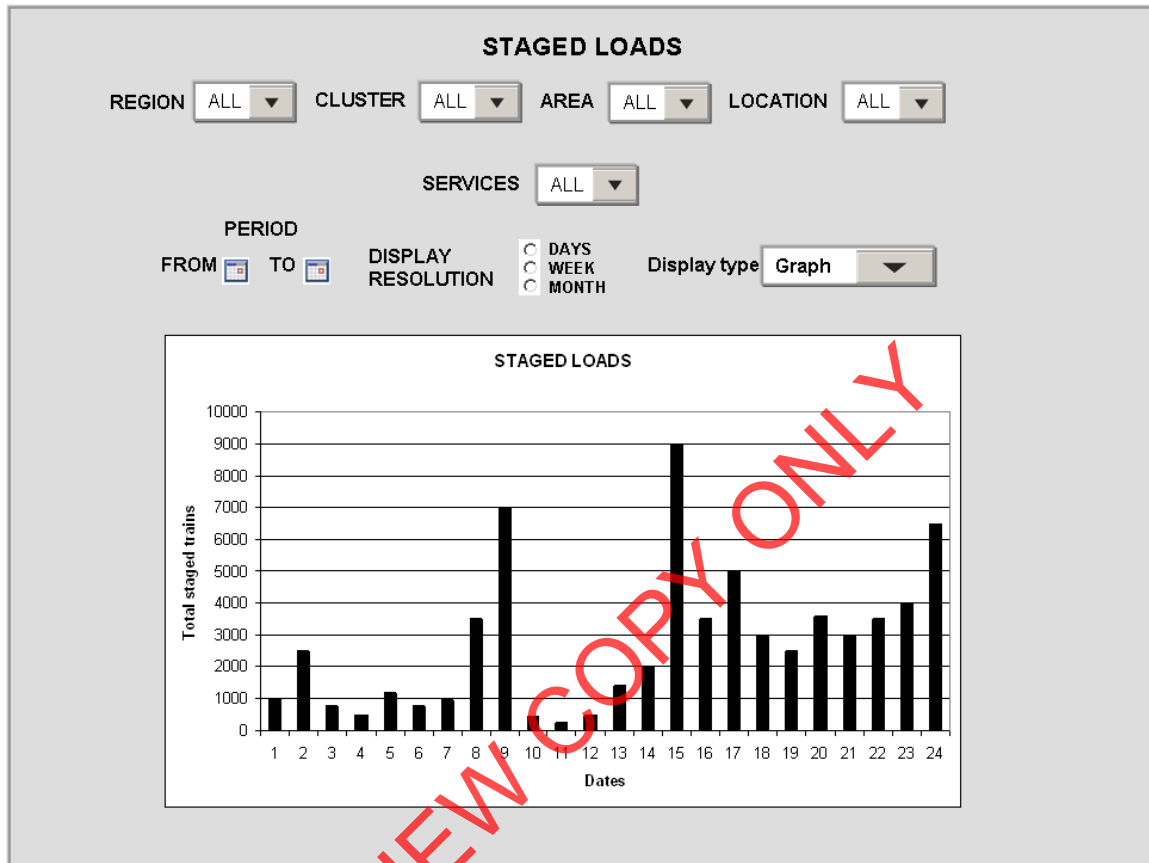

Trains
Locomotives
Wagons

The user would then be able to drill down on each of these summarised lists. In this case, they would select “**Trains**”

Trains
On Time Arrivals - Minutes late per train
On Time Departures - Minutes late per train
Run more trains - Trains run per day
Run trains with all possible wagons - Wagons per train
Staged loads
Locomotives
Locos standing longer than a selected number of hours
Wagons
Wagons standing longer than a selected number of hours

When the user clicks on a specific KPI, e.g. “Staged trains”, the screen with the selection parameters will be displayed for that KPI (**See diagram below**). The “DISPLAY TYPE” will default to “GRAPH”

The following screen with dropdowns will be made available.

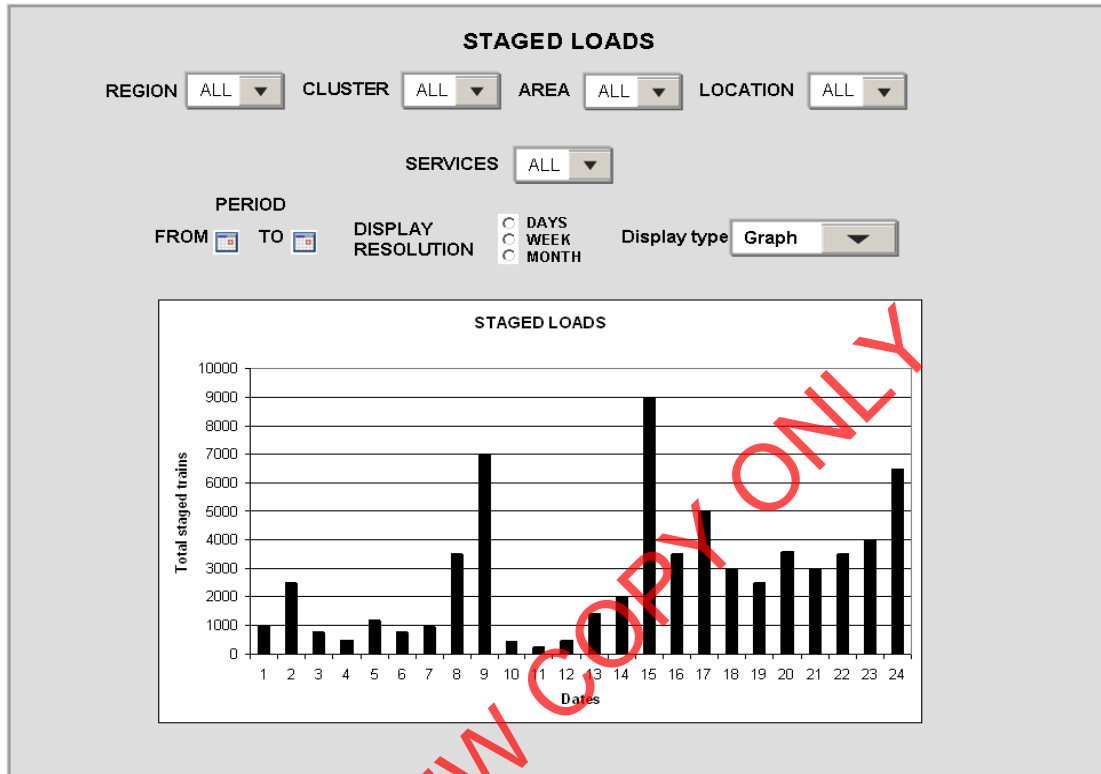

- Region:** Drop down with the following: All, Central, Eastern, and Western.
- Cluster:** Drop down related to region selected, if no region selected all clusters.
- Area:** Drop down related to region selected, if no region selected all areas.
- Location:** Drop down related to region and/or area selected as specific yard/depot can be selected.
- Services:** As used in the ITP (as found in MIS).
- Period (from/to)** User can select with calendars the From – To dates.
- Display resolution** This can be selected to provide information per Day, Week, Month
- Display type:** The output can be either in Graph or Detail format

After completing the above screen the execution of the report to generate information will automatically be performed displaying a bar graph according to the information selected. The “DISPLAY TYPE” will default to “GRAPH”

The user can now change the different dropdown to get the desired results in either Graph of Detail view.

When Graph view is selected together with all the other appropriate selections the graph will be displayed at the bottom of the screen i.e.

If the user selects “Detail” view in “Display type” the following view will be made available

STAGED LOADS

Description of columns on detail screen

- ❖ Train number = Train
- ❖ number that was reported to be staged
- ❖ Depart Form = Location where trains departed from
- ❖ Depart to = Location where trains departed to
- ❖ Current Location = Where the train is staged
- ❖ HAZMAT material = Whether hazardous material is on the train.
- ❖ Standing time (hours) = Total standing time in hours

The  button provides a sorting option in the column where provided.

When the user clicks on the underlined train number, the following screen will be displayed

STAGED LOADS

Column description

- ❖ (--First column--) = Wagon sequence number
- ❖ Wagon number = The wagons number on the train list.
- ❖ Wagon type = The type of the wagons in the previous column
- ❖ Owner = The owner of the wagons in column 2
- ❖ Contents code = The handling code of the specific wagon.
- ❖ Load station = The loading location code.
- ❖ Consignment = The consignment number of the wagons

- Proposed approach (best way to solve current needs/issues)

- To be decided and implemented.

Note: All above displays are illustrative. Final displays will be dependent on system functionality and dashboard standardisation.

8. Business rules

- **Region**
 - It can only belong to one of the following, Central, Eastern, or Western and must exist in Locnet
- **Area**
 - Can only be an area that exists in Locnet.
- **Train number**
 - Must be a valid train number extracted from the database
- **Depart from**
 - Must be a location from the database from where trains depart and must match the selection
- **Depart to**
 - Must be a location from the database where to the trains from the selection list departed to

9. Dataset

10. Technical SQL

Staged loads information can be extracted from the DB2 tables as a snapshot using the following SQL:-

Please ensure that, in the where clause, that the TREINJAR4A and TREINMND4A = the Year and Month in which the SQL is used

```

SELECT
  DISTINCT
    TREINRTE4A | TREINNUM4A | TREINDAG4A | TREINMND4A | TREINJAR4A | |
  ' | | INHOUDC
  D2A AS TRINCNTS,CURRSPEL4A,SUBSTR(GROUPNME99,1,8) AS GROUPNME99,
  ZONEDESC99,COUNT(*) AS COUNT
  FROM RAIL.TREIN_TAB, RAIL.TROKOPR_TAB, RAIL.AREAGROUP_TAB
  WHERE AANSTATS4A = '53'
    AND TREINJAR4A = '08'
    AND TREINMND4A = '12'
    AND TREINRTE4A | TREINNUM4A | TREINDAG4A | TREINMND4A | TREINJAR4A
  = TRNNORIX4A
    AND TNBEWEEG2A = TRNNORIX4A
    AND CURRAREA4A = AREACODE99
  GROUP BY
  TREINRTE4A,TREINNUM4A,TREINDAG4A,TREINMND4A,TREINJAR4A,INHOUDCD2A,
  CURRSPEL4A,GROUPNME99,ZONEDESC99
  ORDER BY 1
  WITH UR

Ideal Sequence?	Role	Accountability (I hereby declare that I have reviewed this document and it ...)
1	ICTM – Programme Management	... is within the scope of the project / programme as defined
2	Process Owner	... correctly defines the business context and measure ... references the correct business processes ... correctly describes related available data and source systems ... identified the current utilisation of the measure
3	Functional MIS representative (where available)	co-sign with process owner and ... designed the display such that it will fit with other dashboards
4	Performance Enablement	... the KPI definition is correct / have been added to the list of definitions ... designed the display such that it will fit with other dashboards
5	ICTM – Portfolio Management	... complies with the standard and contains all the required and relevant content
6	ICTM – Technical / Information Architecture	... provides sufficient information to develop the technical specifications from
7	Sponsor	... addresses the business need as defined
