(i) Verification Agencies accredited by the South African National Accreditation System [SANAS]; or

12. SCHEDULE OF QUANTITY

Works Information

1. THE WORKS INCLUDES

This specification covers the technical part of the contract for:

- ♦ De-stressing of track.
- Replacing of fastenings
- ♦ Replacing of sleepers

Unless otherwise specified, the Contract shall include for all work associated with executing such maintenance work in accordance with generally accepted track maintenance practice and to the standards specified by Track Manual Maintenance (2012), Track Welding Manual (2007) and 110 specifications for Track Maintenance.

2. WORK CONDITIONS TO BE ENCOUNTERED

Material that will be encountered is as rollow:

Rails: 48kg & 57kg Continuous welded rails

Sleepers: Fist: F4 & FY and Pandrol: P2 & PY

Access to the railway the is via service roads. However the condition and the existence thereof cannot be graranteed.

3. TEMPORIRY SPEED RESTRICTIONS

Managery speed restrictions will be imposed on the work area unless need arises.

The condition of the track after completion of a day's work will be so as to allow for the safe passage of trains until work for the following day will commence. No extra time will be allowed on a normal occupation. The contractor will pay penalties, as described in TERMS APPLICABLE, for the track not being available after normal occupation has ended.

4. RAIL DE-STRESSING METHODS ALLOWED

The traditional method refers to the process where all actions are performed by means of manual labour i.e. all preparation actions, loosening of the track components, stress relieving/vibration of the rails and fastening of the track components. The Contractor will rely on the ambient and rail temperature to perform the de-stressing action in the correct temperature range.

The track panels to be de-stressed will be in the order of 1000m.

| Page 18 of 42 | |
|-----------------------------|--|
| | |

Both rails have to be de-stressed simultaneously. Fastening of the rails will be done simultaneously at all times. Depending on the terrain all destressing will be done in the down grade direction.

Closure rails in the curves must be avoided. All closure rails must be inserted in the tangent track.

Under difficult situations a closure rail has to be inserted in the curve. This will be allowed on condition that:

The closure rail is pre-bend for that particular radius.

6.2 TEMPERATURE RANGE CONSIDERATIONS

Special temperature ranges and track conditions are applicable to curves with a radius less than 400m. The Technical Officer will inform the Contractor of the correct temperature range and track conditions applicable to each area.

The Contractor will have approved, accurate and reliable track thermometers evenly spaced and in continuous use during de-stressing.

Rail temperatures will be measured by strong the rail thermometer on the Web of the rail and shading it from direct sunlight. The thermometers must remain in contact with the rail for at least ten minutes before it shead.

The rail temperature must be taken at 30-minute intervals starting one hour before the start of the work. The Contractor will keep a complete record of the de-stressing information on the T1286 (N) form.

6.3 PREPARATION WORK REQUIRED

The Contractor will care plete all related maintenance tasks as described in the schedule of quantities before the rail de-stressing commences.

The vertical and norizontal alignment will be within the B-standard and the general track condition of the track to be within the A-standard before the rail de-stressing contributes.

The Contractor will be allowed to do preparation work to aid productivity of the work's team. Typical preparation tasks such as boxing out of ballast and fastenings can be done provided that it is done under the correct protection circumstances and confirmed with the Technical Officer. It is advisable that such preparation work will be done between trains, which do not cause additional speed restrictions.

Boxing out of the ballast must be done in such a manner that the risk for kick-outs does not increase.

6.4 LOOSENING OF THE RAIL AND FASTENINGS

On the **same day**, before the occupation commences a maximum of 1 in 3 (every fourth one) sleepers may be loosened only after protection has been put out and communicated to the local operational office.

Complete loosening of the sleepers may only take place under full occupation conditions.

Both rails will be cut at the decided cutting place. The rail ends will be placed so that the rails can move freely and not jam into opposite ends.

Loosening of the sleeper fastenings will only be done by the correct equipment, to avoid damaging the fastenings.

All fastening components that will be re-used or inserted must be properly set aside as not to get lost or damaged.

The rail will be lifted on to the rollers/de-stressing jacks from the fixed end and in the direction of the rail cut end. The rails must not touch any part of the rail structure apart from the rollers/de-stressing jacks.

The rollers/de-stressing jacks have to be approved by Transnet Freight Rail before being used in track. The rollers/de-stressing jacks will be tho oughly greased/oiled and properly maintained as to assist in the free movement of the talls.

The rollers/de-stressing jacks will be inserted at intervals not more than 9 sleepers (6m) to prevent bending of the rails and additional friction orces induced which prevent the free movement of the rails.

6.5 STRESS RELIEVING/VIBRATION FRAIL

The rails will be vibrated by vibraters to overcome friction resistance. Vibrating and destressing will proceed from the fixed end to the rail cut end.

6.6 FASTENING OF THE NAIL AND TRACK COMPONENTS

After the rails have been horoughly vibrated and de-stressed, removal of the rollers/destressing jacks and festening of the sleepers will commence.

Removal of the Nilers/de-stressing jacks will take place from the fixed end in the direction of the fail cut end.

Fastering of the sleepers will commence from the fixed end in the direction of the rail cut end

The Contractor will ensure that the sleepers and fastenings are clear from ballast or other materials as not to damage the fastenings/sleepers when the rails are lowered into position.

Fastening of the sleeper fastenings will only be done by the correct equipment as not to damage them.

All sleeper fastenings will be fastened and the rail ends connected to the adjoining rails before the rail temperature goes outside the specified temperature range. If it is not possible to reconnect the rails by welding, fish-plated joints with 4 fish-bolts or joggle fishplates with 4 G-clamps will be installed.

6.7 FINALISATION OF DESTRESSED WORK AREA

After a track panel has been de-stressed and before hand over can take place the Contractor will ensure that:

| Page 20 of 42 | |
|-----------------------------|--|
| | |

All sleepers are correctly spaced and perpendicular to the rails.

All ballast is properly boxed in and the ballast profile conforms to the specification applicable to the particular radius or tangent track.

All track maintenance activities as specified in schedule of quantities have been completed.

-The horizontal and vertical alignment is within the A-standard.

All surplus and/or released material have been removed from the site.

Fastenings must be replaced using proper equipment for this job. Fastenings must be replaced by hand and tamped using politics.

Ballast must be boxed in to correct probles as stipulated in the instruction book.

No ballast must be in contact with the sail and must be leveled with the top part of sleeper below the bottom of the rail.

The condition of the trace efter completion of days work will be so as to allow for safe passage of trains uptil york for the following day will commence.

This condition must be insured each day before leaving the site.

Align skew leepers where instructed by the Technical Officer.
