5. General Requirements

- 5.1 This specification outlines the requirements of a heavy-duty hydraulically operated rail profile grinding machine.
- 5.2 The machine will be used to grind excess metal on the running top and side of rails with varying manganese, chrome and carbon content.

6. Detailed Requirements

6.1 Preferred Mass

- 6.1.1 The mass of the grinder must not exceed 70 kg.

6.2 Hydraulic System Requirements

- 6.2.1 The machine must comply to HTMA standards for hydraulic tool operation.
- 6.2.2 The machine must operate on the "Open Centre Circuit" hydraulic system.
- 6.2.3 The hydraulic supply will meet the requirements of HTMA Type RR System and the rail drill must operate effectively on this standard.
- 6.2.4 The grinder must be equipped with 12mm ($\frac{1}{2}$ ") hydraulic whip hoses that comply to DIN EN 853 - 2SN (Rubber Hoses and Hose Assemblies - Wire Braid Reinforced Hydraulic Type).
- 6.2.5 The whip hoses must be 400mm long.
- 6.2.6 The whip hoses must be fitted with 12mm ($\frac{1}{2}$ ") fixed male and female quick release flat-face fittings that comply to HTMA standards. The quick release fittings must be fitted with dust caps.
- 6.2.7 Hose connections must be placed in a position that would assist in the balance of the machine and make it easy for the operator to handle and move the machine.
- 6.2.8 Coupling points are to indicate whether they are supply or return points.

6.3 Grinder Mobility

- 6.3.1 The machine must be fitted with guide and support rollers.
- 6.3.2 The guide rollers must permit the grinder to be moved and operated on the rail in all positions from the vertical to the horizontal.
- 6.3.3 The guide rollers must accommodate various rail widths as per Annexure A.
- 6.3.4 The grinding head must be easily positioned across the profile and locked in any of these positions.
- 6.2.5 The grinder must be stable during all grinding processes.

6.4 Noise Emission

6.4.1 The grinder must comply to BS EN ISO 4871:1997 (Declaration and verification of noise emission values of machinery and equipment).

6.5 Operating Speed

6.5.1 The maximum no-load speed must not exceed 4000 rpm.

6.6 Grinding Wheel Shroud

6.6.1 The grinding wheel must be protected by a shroud.

6.6.2 The shroud must allow for the insertion of the shaft locking spanner and removal of the grinding wheel without having to remove the shroud.

6.7 Grinding Head

6.7.1 It must be possible to vertically adjust the grinding head.

6.7.2 There must be ample total movement of the grinding wheel into the shroud to accommodate wear of the grindstone.

6.8 Grinding Movements

6.8.1 The machine must be capable of grinding continuously at any position within 90 degrees on either side of the vertical.

6.8.2 The grinder must enable the operator to grind the rail to a tolerance of 0.2mm over 1m.

6.9 Positioning of Controls

6.9.1 The controls must be easily accessible to the operator.

6.9.2 The control arm must be designed so as to allow the operator to remain in a comfortable position when grinding the top and sides of the rail.

6.10 Safety

6.10.1 The grinder is to be provided with suitable safety guards, as per South African Abrasives Association, to protect against the risks resulting from wheel breakage.

6.10.2 The grinder must be provided with a safety device to prevent accidental switch-on and a dead-man handle.

6.10.3 The maximum no load speed (rpm) of the grinder must be clearly marked.

6.10.4 Suitable spark protection must be provided.

6.11 Component Markings

- 6.11.1 The grinder is to be clearly marked in respect of hydraulic oil flow required.
- 6.11.2 Coupling points are also to indicate whether they are supply or return points.

6.12 Body

- 6.12.1 The frame and components of the machine must be robust.
- 6.12.2 The machine must be well protected against rust.
- 6.12.3 The grip on the handles must have a non-slip surface.
- 6.12.4 The machines will be accepted in standard factory finish and colour.
Due cognisance must be given to the life requirement of the machine.
- 6.12.5 A suitable lifting point must be provided so that the grinder can be lifted by mechanical means.

6.13 Ergonomics

- 6.13.1 The tool must be ergonomically designed for maximum operator productivity, safety and transportability.

7. Quality Control

- 7.1 All machines must be manufactured in an environment that complies to the latest ISO 9000 to ISO 9004 or similar quality control standards. Details must be furnished.
- 7.2 Machines will be subject to a technical evaluation and the final decision will, amongst others, be based on these findings.

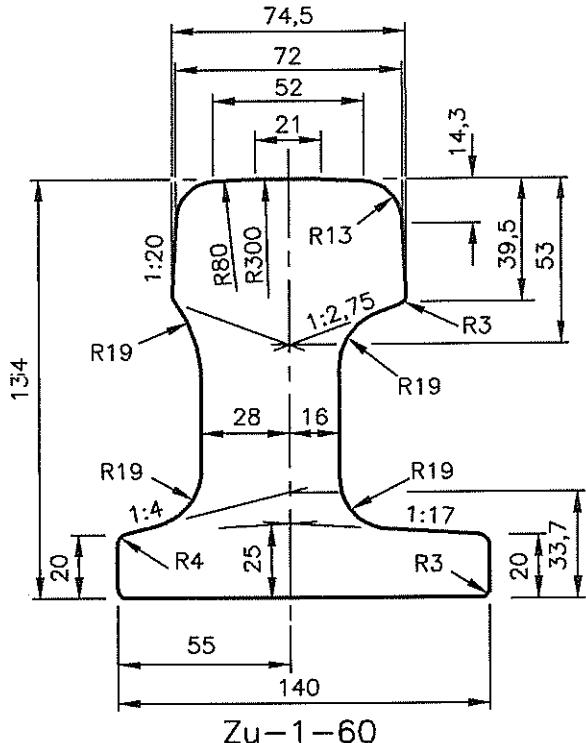

“PREVIEW COPY ONLY”

8. Legal and Operational

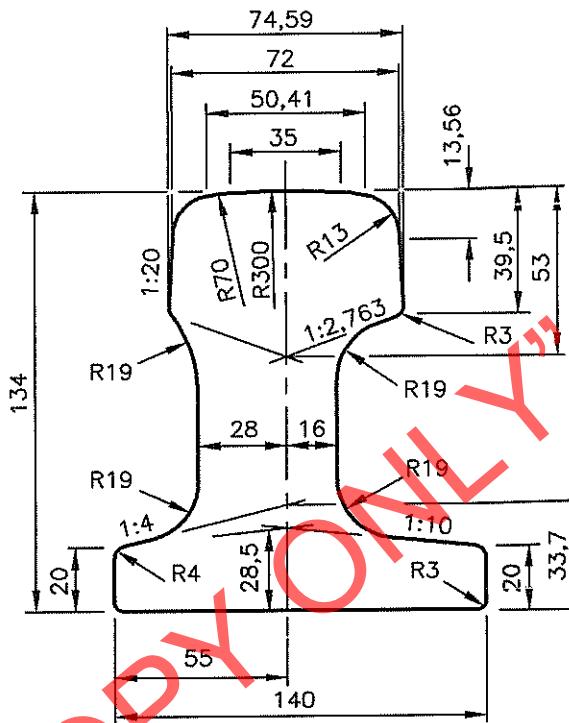

- 8.1 All machines must comply with the requirements of the Machinery and Occupational Safety Act, (Act 85 of 1993 – General Machinery Regulations) and The Machinery Directive 98/37/EC.
- 8.2 The rail drill must be completely assembled and filled with lubricants and ready for service in all respects.
- 8.3 Where grease nipples are fitted these are to be to DIN 71412 in easily accessible positions. Full details of lubrication applicable to machines on offer to be submitted.
- 8.4 An operator's handbook, service manual and spare parts list must be supplied with each machine in order to ensure that the machine is operated in accordance to the manufacturer's instructions.
- 8.5 All machines and equipment must be supplied complete with essential tools such as allen keys, spanners etc. in order to make essential adjustments as well as to fit or remove consumable items.
- 8.6 Suppliers of hydraulic machinery will be required to stock a full range of readily available spare parts required for the maintenance of these machines throughout their life span. Full details of service organisation is to be submitted.
- 8.7 Consumable items must be available locally and must be of standardised format in order to be used on equipment of more than one supplier.
- 8.8 All machines and equipment is to be guaranteed for a minimum period of 12 months against faulty material and workmanship - fair wear and tear excluded. Full details of guarantee is to be submitted.
- 8.9 The information as requested by the various clauses in this specification are to be supplied in the form of technical data, pamphlets and/or drawings. If this is not complied to, offers may be overlooked.
- 8.10 Each machine purchased will be issued with a project number consisting of 20 characters which must be stamped or engraved directly onto the machine or on the manufacturer's data plate or a separate riveted plate on the particular machine.
- 8.11 Sufficient training must be given to all operators of these machines.
- 8.12 Machines not already in service with Transnet Freight Rail must be made available for testing/evaluation during the adjudication of the tender. Technical improvements on existing machines/equipment is to be substantiated by physical examples.
